FOREWORD

In the continuing search for creative and systematic approaches to understanding the dynamics of national security policy, the function of intelligence has recently been attracting fresh academic attention. This development, I feel, is sound, constructive, and merits encouragement. My premise is that disciplined inquiry into the intelligence process can serve the interests of higher education, scholarship, and an informed public opinion.

The inquiries and disputes of the past five years have amply demonstrated that American citizens need a better understanding of just what our intelligence agencies do, what they cannot or should not do, and what the system of political control and accountability is. Above all, officials and citizens alike need authoritative explanations of the essential contribution intelligence must make to national decision-making, defense, arms control, and maintenance of international peace in a dangerous world.

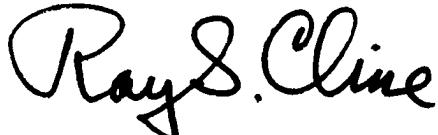

The place to start the accumulation of knowledge about the role of intelligence in our society is logically in our advanced research and educational institutions. Yet there was until recently an almost complete void in our universities insofar as specific courses devoted to the subject of intelligence as a part of our political process and international affairs.

Happily, as this monograph shows, a serious,

scholarly discussion of intelligence as a factor in policymaking has begun in the halls of colleges and universities in the past few years. Most of the research and instruction have been based on the personal initiatives of a number of individual teachers with special interest and experience in the field. It is, therefore, now for the first time feasible, sensible, and constructive for academic and research institutions to begin to exchange information on courses, projects, and programs devoted entirely or partially to the subject of intelligence.

The National Intelligence Study Center (NISC), in this first publication, hopes to assist the process of intellectual cross-fertilization among interested scholars. NISC's basic aim is to facilitate whatever tasks are necessary to lay the foundation for a better understanding of the importance of good intelligence in a democracy.

Wilfred D. Koplowitz, formerly Director of Intelligence Studies at the National War College and the National Defense University, has brought to this survey his own considerable experience in "Teaching Intelligence," as well as his broad understanding of intelligence functions and processes. His continuing efforts to encourage and improve the teaching of intelligence has enjoyed the support of the International Studies Association (ISA) and the Association of Former Intelligence Officers (AFIO), as well as the Board of Directors of NISC.

INTRODUCTORY NOTES

Fresh interest in intelligence, long regarded as an arcane and even nefarious activity involving persons of doubtful character and eccentric powers of reason, derives from several factors, some substantive and others circumstantial.

There is an obvious and maturing appreciation for the significance of intelligence in the public policy and decision-making process. Scholarly trailblazers produced seminal works on this relationship after World War II. The subjects chosen reflected momentous experiences of that global conflict: Operation Barbarossa, the German attack on the Soviet Union; the Japanese attack on the United States at Pearl Harbor; ULTRA, the deciphering of the German code by British cryptanalysts; the Double-Cross System, the British manipulation of German agents in Great Britain.

The curve of attention crept steadily upward in the ensuing years in the area of intelligence performance, a phenomenon nourished by classic cases of strategic surprise, warning, and deception emanating from recurring Cuban and Mideast eruptions. Scholars linked their work to crises and decision-making, buttressed by new perceptions of individual and group behavior in bureaucratic settings.

The serious and valuable products of this period focused less on intelligence as a composite set of

functions, actors, and institutions than on the central, though not all-encompassing, issue of intelligence and policy relationships.

It is likely that the teaching of intelligence in a more comprehensive mode would have gradually commanded itself to the academic community, but the shock of exposé and alleged scandal accelerated the process. The spread of courses related to intelligence in academia during the past half dozen years, therefore, can be attributed more to public controversy than to private analysis.

Revelations of certain mistakes and misdeeds, concern about presidential misuse of intelligence agencies, media exposures of activities cutting close to the bone of constitutional and ethical muscle, and attendant publication of heretofore privileged information have all prompted the faculty and students in institutions of higher learning to scrutinize the intelligence factor. Housed in established academic frameworks, a new, broader focus and an aggressive curiosity can now be satisfied to a substantial degree.

This monograph reports on a survey, under the sponsorship of the National Intelligence Study Center (NISC), of major colleges and universities in the United States, and a few elsewhere, to identify current course offerings related to any aspect of the intelligence process. The survey grew out of a panel on "Teaching Intelligence" convened at the March 1979 Annual Convention of the International Studies Association (ISA) in Toronto. To enrich the exchange of data and insights begun at that meeting, it seemed useful to determine who was teaching intelligence courses,

to whom, where, how, and why. Gleanings from this relatively brief experience suggest the nature of improvements needed in materials supporting intelligence sources.

The basic tool of the survey was a questionnaire designed to be "value free." Questions avoided reference to controversial issues in the intelligence field and were meant to be neutral on the matter of how intelligence should be taught. While the thrust of the questionnaire was toward identifying and describing "whole intelligence courses," or courses entirely devoted to intelligence, our interest encompassed "component courses," or courses on a broad subject only partially devoted to intelligence.

Bibliographic data noted on the questionnaire's responses is extensive but incomplete, except for those courses on which syllabi were submitted. However, syllabi were received for most whole intelligence courses and probably represent accurately the readings generally in use.

The survey did not seek explicit evaluative data or comment. It requested average student enrollment to determine levels of interest and participation as well as instructional techniques used by course directors. Responses, on the whole, give the impression of faculty and student satisfaction with the educational product. A few report ameliorative revisions, in the light of continuing review, to make an improvement in the product.

Educational institutions offering either whole intelligence courses or intelligence components in

broader courses run the gamut in terms of location, size, prestige, academic philosophy, and auspices. State universities, small private liberal arts and venerable "Ivy League" colleges, as well as service academies, are inserting intelligence studies into their curricula. Undergraduate whole intelligence courses are most often housed in departments of political science. A few are administered by departments of government or history. The graduate offerings are usually in international relations institutes or related special programs. Intelligence components appear in courses across a spectrum from foreign policy to national security studies and military history.

This monograph summarizes the responses to the questionnaire, provides names and addresses of involved persons, and offers concluding observations and an agenda for academic support development. We hope these findings nourish interest in the teaching of intelligence, stimulate a continuing exchange of pertinent information, and evoke constructive ideas about how to do it better.

COURSE CONCEPTS AND CONTENT

Intelligence: A Process Within a Process

Intelligence, produced by a somewhat idiosyncratic process, is properly viewed in academia as an input to a larger process culminating in policy and, ultimately, in action or deliberate inaction. The educational objective, often explicitly stated in course syllabi, is to understand how intelligence is produced, how it affects the nation-state's conduct of its external relations, and, thus, how intelligence fits into the total fabric of world affairs.

The teaching of intelligence in academic institutions places the subject within the broader frameworks of national security, foreign policy, or international relations. This is generally the case in an intellectual sense whether or not classroom treatment occurs in courses labelled "intelligence" or some other rubric.

It further follows that teaching highlights the relationship of intelligence to policy. Ancillary attention is paid to how raw intelligence is acquired, combined, and refined by analysis into substantive reports, including national intelligence estimates. There is a natural fascination with the techniques and skills involved in the often romanticized craft of espionage.

In the military service schools, the policy

perspective also prevails, but there is much greater interest in the intricacies of human and technical collection systems, as students expect some involvement in these functions during their careers.

There is a persisting preoccupation in academic and professional intelligence circles with the phenomenon called "intelligence failure." This subject accommodates a growing interest in the psychological and sociological ingredients of research and analysis--i.e., the resultant intelligence product --and the ability of the policy system to exploit the product or, indeed, to evaluate it as an element in exploitation.

Survey Courses.

The majority of whole intelligence courses are described by respondents as "survey courses." Both a comprehensive and eclectic quality is evident. The courses offered range widely. They convey the history, structure, and dynamics of the United States intelligence community and review the American experience in intelligence. A few courses reach back to World War I and take the student through the sparse chronicles of American intelligence efforts between the wars. The story picks up a beat as the country enters World War II, and the Office of Strategic Services (OSS) becomes a vital and particularly exciting arm of the nation's wartime interest.

The typical survey course then moves quickly to describe the contemporary intelligence community emphasizing the Central Intelligence Agency (CIA), its original chartering in 1947, its evolution in the 1950s and 1960s, its trials and tribulations played

out in the investigations and reforms of the 1970s.

Most courses project these historical cum institutional features as backdrop for subsequent units which select among several options depending on the instructor's ideas and interests. The policy relationship, as noted, dominates. Another option hones the double edges of espionage, counterintelligence, subversion, and covert action. This takes the class squarely into the more controversial, clandestine domain where value judgments can weigh heavily on how the material is handled and received.

In this option, the students wrestle with the issue of "Intelligence in a Democratic Society." Virtually all courses surveyed spend some time on the multiple and interrelated problems to which the United States Government and body politic have turned during the past several years. Thus, the students debate the conflict between the inherent need for secrecy in intelligence work and the citizen's "right to know." They confront the tension between national security requirements, especially counterintelligence, to protect vital secrets, and the constitutional rights of individuals. They strive to resolve the stress created by the President's prerogatives to conduct foreign policy and intelligence operations and the U.S. Congress's obligation to review policy results, monitor performance, and appropriate funds.

Certain survey courses interlace all of the above, or supplement it, with a comparative study of --with at least a look at--a few foreign intelligence services. The Soviet Union's Committee for State Security (KGB), the Chief Intelligence Directorate

of the Soviet General Staff (GRU), the Soviet satellite services, the British, French, German, and, increasingly, the Israeli intelligence systems are discussed. Due to the relative paucity of open literature and direct professorial experience, the study of these foreign institutions is necessarily brief and superficial. Nevertheless, the attempt at comparisons and the inclusion of material on the "opposition" suggest an awareness of the cross-cultural aspects of the intelligence function in the international system and the relevance of the threat to national interests emanating from acknowledged adversaries.

Variations on the Survey Approach.

A few courses depart from the broad survey concept and focus on a particular facet of the intelligence field. One such course addresses the utility of covert action as practiced by both the KGB and the CIA. Another, reflecting the overall purposes of the graduate institution in which it is offered, is attempting to describe and analyze the intrinsic problems of command, control, communications, and intelligence as confronted by both government and industry. This scrutiny of the generic phenomenon whereby all organizations require, collect, process, and utilize intelligence is especially pertinent to the quest for a "theory of intelligence."

The Academic Thirst for Theory.

Several professors teaching intelligence courses are keen to introduce theoretical concepts into the educational experience. Theoretical work meeting academic standards is available on "intelligence

failure," and in related areas of crisis management, decision-making, and policy formulation. An all-encompassing view of intelligence from one end of the cycle to the other expressed in psychological, organizational, and political--in effect, in systemic--terms has not emerged either from the world of practice or scholarship.

Intelligence "Components."

Academic treatment of the intelligence process has favored the component formula rather than the whole intelligence course approach. This is the traditional preference and is still widely held. According to this school, intelligence, despite its unique characteristics, does not merit vertical, albeit disciplined study. It exists by definition to serve policy, its making and its execution. Fascinating in a special way, even compellingly so, it is only one of many critical inputs to the policy process. Granting that newly available data on its inner workings enhances understanding, to remove "intelligence" from its total anatomy for curriculum packaging bestows on it an unwarranted and even misleading importance.

On a more mundane level, component treatment reflects limited resources. Academic budgets are tight. Department chairmen and professors, forced to choose among courses on foreign policy, national security policy formulation, international relations, and a new course dealing exclusively with intelligence, will generally opt for the broader program. Moreover, university faculty may feel somewhat less comfortable with the latter subject, despite newly available open sources, than with established, fundamental

core subjects in the general field. Until an interested faculty member can immerse himself or herself in the subject, there may be some hesitance to teach intelligence in the light of the premium put on direct experience as an ingredient of authority. In still other cases, and this is a subtle point, skepticism about, or downright hostility to, what has been learned of the American intelligence practice may inhibit instructor enthusiasm for course development. This deep concern can, of course, have the opposite effect.

Whatever the reason, conviction or convenience, the component formula continues to prevail on most campuses. It puts intelligence in most instances within courses on American foreign policy or national security studies. In the latter, strategic and defense factors, and the related intelligence ones, are covered in more detail than in the former. Both address the government's decision-making process and, in so doing, include the "intelligence factor" as a substantive input to rational, bureaucratic politics, and other models.

Teachers of diplomatic and military history, international relations, and international politics are weaving the intelligence thread into their particular tapestries. When viewing the overall sweep of history, the interplay of diplomacy, or the fortunes of war, the role of intelligence can be identified and evaluated from the 1917 telegram of German Foreign Secretary Alfred Zimmerman to his Ambassador in Mexico, to ULTRA, and the discovery in the 1950s of Soviet espionage agents, Julius and Ethel Rosenberg.

When dissecting the contemporary international

system and analyzing the instruments by which states protect and advance national interests vis-à-vis other sovereign states, the function of both intelligence and covert action figures strongly. Teachers of international relations recognize that intelligence, in all of its institutional and behavioral aspects, is an attribute of the system, as is armed conflict. They also recognize that there are certain discernible practices, unwritten rules, and codes, which subtly govern intelligence conduct within the system.

The Rationale for "Whole Intelligence Courses."

Advocates of whole intelligence courses reason as follows: Dealing with the complex intelligence function in discrete courses labelled "intelligence" is logical in the light of the unique characteristics acknowledged by component advocates. As an element of national power--i.e., the state's capacity to pursue its interests, and especially as applied to great power portfolios--intelligence has heretofore not been subject to the disciplined scrutiny given to the diplomatic, military, economic, geographic, and cultural aspects of state power and craft. A reasonably disciplined scrutiny is now feasible from reasonably authenticated sources.

Finally, whole course champions note that the broad controversy surrounding the U.S. intelligence establishment has touched many vital parts of our socio-political system. That controversy is significant for our politics and our values. It can best be organized for study and informed discussion if given separate, somewhat extended, treatment including appropriate references to history and comparative

phenomena.

At the same time, the central and powerful point of the component school cannot be and is not ignored. Studying intelligence can only be accomplished sensibly if intelligence is viewed within larger contexts, namely, the culture, the government, the decision process, and, indeed, the whole systemic environment in which it operates. A successful academic course, whole or component, will never isolate the intelligence function even as it examines its internal dynamics.

Intelligence Education in the Official Community.

Government officials concerned with national security affairs are either producers or consumers of intelligence, or both. Exposed to intelligence courses at various points in their continuing career education, these officials are essentially being trained to perform their jobs more ably. There is a strong common denominator in courses designed to analyze the intelligence relationship to policy as it appears from inside the government and similar courses conducted in the academic community. It is interesting to note that the "thirst for theory" observed in academia is beginning to parch the throats of practitioners who are unanimous in their view that such abstractions must be manifestly tied to actual experience and, in turn, be useful to it.

The Central Intelligence Agency and the U.S. Department of Defense maintain sophisticated educational/training programs. An employee may be studying--or training--for as little as a few weeks or as

long as two years and at various stages of his or her career. Courses can be general or very specific. As a collective enterprise, the intelligence community offers an elaborate array of courses in all phases of the intelligence process.

Care is taken in official institutions to underline the point made at the beginning of this discussion concerning concepts and content. Intelligence cannot be isolated. It must be set soundly in its policy and management contexts. Moreover, in recent years, the public debate and legislative outcomes have prompted appropriate attention to placing the intelligence function in its even broader societal and philosophical framework. Needless to say, there is little argument in official circles about the priority requirement to "get the job done" on behalf of compelling national interests. The stress is on the latter, the essential task of professional education in this field.

In both the CIA and the Defense intelligence complex, there is positive interest in nourishing the disciplined teaching of intelligence in the academic community. There is, also, a desire to be supportive in appropriate ways.

THE BIBLIOGRAPHIC STORY

The veritable explosion in the literature of intelligence during the past ten years has supported and nourished the teaching of intelligence. The nourishment has titillated the professorial palate but has not satisfied the collective academic appetite. There is no single published book which has achieved general acceptance as a quasi-textbook on the overall subject. There are, however, several works which are gaining favor as contributing primary sources for the recurring elements in the sources described elsewhere in this report.

The volumes of testimony and findings published by the Government Printing Office in the wake of Senate and House committee investigations have been used selectively by many course directors. Books I and II of the Church Committee Reports are now, unfortunately, out of print. A commercially edited compilation of key items from this source has proved to be a convenient, one volume package. It was published by R. R. Bowker in 1977 in the Public Documents Series.

The literature serving academic courses on intelligence--whole or component--may be placed into several categories, according to the background of authors. They have come from three principal directions: intelligence and policy professionals, i.e.,

practitioners, agents, case officers, analysts, senior managers, and policymakers; academicians; and finally, writers and journalists. In a few notable cases, producers of intelligence literature have moved from the practice of the craft to scholarship and teaching and, occasionally, to the media.

There is, of course, the rather special category of the "make believe" and the somewhat more illuminating roman a clef. Intelligence fiction has embellished the modicum of romance in the second oldest profession. In the post World War II period spy fiction provided bountiful evidence of its appeal to the general public. Teachers of intelligence seem aware of its limitations as a serious source of knowledge about the intelligence business. At the same time, they are finding imaginative ways to exploit fiction for human and other insights, and they have used it as a dramatic foil to clarify the difference between pre-course images of intelligence and newly discovered reality.

Practitioner's Product.

Practitioners are turning out material, including spy fiction, of great variety and quality. A few have attempted what might be described as road maps for neophytes covering the topography of the intelligence world. The Craft of Intelligence by Allen Dulles was an early example. Despite its lucidity, this opus by a highly experienced officer has diminishing appeal to today's intelligence academics as it predates the more revealing and dramatic outpourings of subsequent professional writers. It is, of course,

unabashed in its advocacy of a strong American intelligence program.

Later, highly placed veterans, loyal but hardly uncritical intelligence officials--Lyman Kirkpatrick, Sherman Kent, Ray Cline, Harry Rositzke, David Phillips, William Colby--to mention only a few--offered a rich assortment of history, memoirs, essays, and post-career distillations of their experience. Other former intelligence and policy officials have vented their disapproval and disdain for the mission, performance, and personnel of the intelligence/policy sector. The disaffection of men like Victor Marchetti, John Marks, John Stockwell, "Little Joe" Smith, Morton Halperin, and what many term the defection of Philip Agee, have put into the public domain a mixture of fact, heretofore secret, and sharp allegation, frequently self-serving. This collection of dissident writing is being heavily exploited in whole intelligence courses. It feeds the debate concerning legitimate issues enjoying prominent place in intelligence-related curricula. A few course directors seem to weight reading lists with the work of protagonists reflecting a particular point of view. However, in most courses described in this report an attempt is made to expose the student to competing positions and perspectives.

Academic Contribution.

Formidable contributions to the literature have come from the academic sector. These have been essentially in the realms of decision-making, intelligence/policy dynamics, and intelligence failure. The scholarship of Roberta Wohlstetter, Klaus Knorr, Graham Allison, Richard Betts, and many others is recognized and used to advantage by course directors. As the current crop of younger faculty interested in intelligence

deepen their grasp of the field, identify gaps in the literature, mature their course offerings, and sharpen the research tools of graduate students, fresh contributions can be expected.

Media Sources.

For many years journalists were fascinated and frustrated by the "intelligence story." Aggressive investigative reporting, much of it not verifiable in the 1950s and 1960s, produced provocative and, as in the case of practitioner memoirs, mixed results. As the environment changed, the tight lid of secrecy loosened. The merits of this development aside, journalists and other writers on intelligence are now able to obtain documentary material, to interview former intelligence officers willing to impart information, and, in general, to confirm their findings more often than previously. Intelligence courses are using, in appropriate ways, the work of David Kahn, John Barron, and the well-received book by Thomas Powers on Richard Helms and the CIA.

Data available from the questionnaire responses does not reveal a broad and systematic utilization of press and periodical literature. However, students are probably being directed to these items on an ad hoc basis as the courses unfold. While much of this coverage tends to sensationalism or is perishable, there are some interesting contributions in both scholarly and popular journals and, occasionally, in the daily and weekly press.

STUDENT REQUIREMENTS AND TEACHING METHODOLOGIES

Whole intelligence courses, in general, are hewing to traditional procedures and techniques used in college and university teaching. Lectures by the professor, sometimes supplemented by visitations from outside experts, are followed by class discussion. Students demonstrate acquired knowledge by taking tests--short quizzes, midterm and/or final examinations. They are almost always required to produce other written documents--short essays, book reviews, or, as is most often the case, longer, researched, annotated term papers. Demands are often heavy, but fair, and consistent with normal burdens imposed by credit courses.

A few intelligence course directors are using techniques, not unique to the total academic experience, but not yet widely employed by their colleagues teaching about intelligence. These approaches put the student as squarely as possible into the practitioners harness. They attempt to build appreciation for the special pressures of the real intelligence world and to concretize the abstractions and generalizations necessarily deriving from classroom study.

To illustrate:

Professor Harry Howe Ransom, one of the early teachers of intelligence, puts his classes at

Vanderbilt University into a Congressional hearing mode. Each student assumes the identity of a well-known witness, legislator, or staff aide. The student addresses the issue before the committee in real life terms, advocates and defends his role viewpoint, and deals with the interrogation of other role players. Dr. Ray S. Cline, a former Deputy Director for Intelligence, CIA, teaching at Georgetown University, poses a hypothetical, but realistic task for a student national intelligence estimator. The challenge forms the framework for a required term paper, forces analysis within the discipline imposed by the intelligence/policy relationship. Lyman Kirkpatrick, a former senior intelligence executive, now at Brown University, illuminates cumulating principles and conclusions by actual case studies, some drawn from his own extensive experience. While somewhat different from the oral role playing used by Professor Ransom, Peter Beckman, teaching at Hobart and William Smith colleges, confronts his students during examinations with rigorous, analytical, practical problems which push them to extract critical material from course presentations and respond from practitioner perspectives.

Experimentation, including scenarios and simulations with built-in intelligence factors, is occurring elsewhere. The net impression is left, however, that the instructional approach to teaching intelligence is, in the main, relatively straightforward at this time.

PERCEIVED NEEDS
FOR
IMPROVED COURSE SUPPORT MATERIALS

A central aim of this survey is the identification of gaps in the portfolio of instructional aids to sound teaching about intelligence. While the quality of teaching and learning is ultimately dictated by the quality of the individual teacher and the motivation of individual students, the relative newness of intelligence subjects on the university scene makes support materials, especially the literature, very important. Appreciating that many courses have been recently designed, that the literature, while expanding, is incomplete and often inspired by non-academic interests, and that classification has necessarily inhibited case-study development in the public sector, the questionnaire solicited views on what is needed to enhance the educational experience for students of intelligence.

Respondents have confirmed some pre-survey assumptions and offered specific, creative suggestions. The recommendations have come both from teachers of whole intelligence courses and from many professors incorporating intelligence components in broader courses.

Support needs may be grouped in a few general categories: bibliographies and reading lists, case studies and simulations, adjunct expertise and professional/academic conferences.

The Literature.

With regard to reading material, syllabi indicate that familiarity with the literature is growing. Some requests for authoritative, tailored bibliographies have been made, however. There are, in fact, several published bibliographies, and one superior, annotated list of intelligence literature produced regularly in official circles. It has received limited distribution in academic circles. One respondent suggested that a special book list be drawn up "geared to undergraduate use." Annotations would indicate which of the "classics" remain valid given the passage of time since original publication, and which of the anti-CIA books are "least irresponsible."

The suggestions for future intelligence writing in the educational context are evenly divided between those calling for a single work to serve as a standard textbook--"a short, cheap, reliable basic text"--and for "more scholarly works." One respondent solicits writing which is "analytical...not memoirs, histories, and polemics; we are at a stage where we need to be more conceptual, analytical, indeed, 'scientific.'"

Still other professors state their needs are either difficult to acquire or unavailable. For example, they suggest a requirement for additional data on foreign intelligence systems; for a solid publication on international legal rights and responsibilities associated with intelligence collection; for studies on how information is turned into intelligence analysis; and for an unbiased treatment of covert operations. These are gaps in the literature noted by the respondents. They invite production of a compendium

of articles on collection of information, on intelligence failure--or success--and on covert actions with illustrations of the utility and disutility of this instrument of foreign policy.

In short, there is widespread enthusiasm for something convenient and comprehensive.

Case Studies and Simulations.

The interest in case studies is virtually unanimous and follows the pattern noted in the literary agenda. Recognizing that concreteness and actual experience can illuminate principle and generalization, the academic respondents express keen interest in case studies concerning the linkage between intelligence and policy, i.e., when is intelligence "good" or "bad" and is it utilized in given decisions? One professor will welcome cases which exemplify the conflict between secrecy and disclosure pressures, which dramatize the on-the-ground ethical issues involved in all phases of intelligence work, and which make meaningful the complexities of bureaucratic organization and politics in the intelligence community. To repeat a recurring theme another thoughtful educator offered the opinion that even the concrete case studies should be "theoretically informed."

The recommendation to construct a reader combining essays and case studies reflected a broadly asserted set of requirements.

In this category of practical applications, the idea of designing innovative simulations or "intelligence war games" found clear resonance. The "game"

would, of course, be one of multi-dimensional interstate conflict, rather than oriented simply to use of military force. There is strong interest in this "hands on" platform for both educating and evaluating students.

Experts and Conferences.

In the third set of perceived needs, there is receptivity to exploiting the insights of professional intelligence and/or policy officers, working or retired, who might add a dimension to the class readings, case studies, lectures, and discussions. Interested professors also generally observe that inadequate budgets constrain their ability to extend invitations offering travel expenses or honoraria.

This openness to outside ideas and expertise also manifests itself in suggestions for small, well-prepared conferences of qualified scholars and practitioners to examine outstanding analytical problems, to exchange information about teaching experiences, and to obtain up-to-date material from the official intelligence community on how the community's business is organized and executed.

Visuals.

An increasing supply of relevant film and video production exists, much of it available for loan, rent, or purchase. Ranging across a wide spectrum of topic, objectivity, and quality, this body of visual intelligence literature requires selectivity and discipline in its exploitation, but is clearly under-exploited at the moment in the educational arena.

Research.

The survey attempted to identify intelligence related research recently completed or underway at above the undergraduate level. Such activity can itself enrich the course reading lists. Responses to this item were scarce. A few academicians involved in teaching are also researching in the field and are preparing manuscripts and books. One survey respondent, in commenting on course support needs, aptly noted the lack of special grants and fellowships for graduate students interested in intelligence. Expansion of such resources would spur research, and, thus augment the literature supporting education on the subject.

GENERAL OBSERVATIONS

Academic sponsorship of study and teaching about "intelligence" is expanding.

As noted at the outset, this apparent trend was a stimulus for the survey and has been substantiated by its findings. Student interest, expressed in course enrollment, is high. (Courses are uniformly electives.) Professorial enthusiasm is less pervasive, but the vigor and vivaciousness of those faculty members initiating intelligence courses are remarkable.

Certain responses--or, indeed, a possible factor in the failure to respond--connote continuing resistance to bestowing the bonafides of academe on a function long thought to be operationally dominated, officially sheltered, and impervious to disciplined or theoretical examination from outside its own professional ranks.

Parallel-to-lingering skepticism is increasing receptivity to the idea that intelligence courses, whole or component, merit objective consideration. Many negative responses seemed to solicit survey results and further data with this in mind.

The courses identified contain many common features, especially when constructed as broad surveys.

These relate to the history of the United States intelligence community, the intelligence cycle, the special functions of counterintelligence and covert action, the central issues of intelligence/policy relationships and, of course, the problems attendant on recent investigations, reorganizations, and reforms.

While commonality exists, so also do varied themes and foci. There is a pronounced eclectic quality to many courses on intelligence.

One senses a certain groping for an optimum introductory course structure. This could be an abortive search or even counterproductive. Variety is natural and healthy. Courses must reflect the special interests of professors, the thrust of the sponsoring departmental disciplines, and, to a reasonable degree, student orientations. Basic concepts aside, a comparison of syllabi reveals some courses as being more coherent and logical in their internal progression than others. Some appear more probing than others; some demand more student intellectual effort than others.

The quest for theories, if not to embrace the universe of intelligence, at least to explain its segmented mysteries, is a legitimate concomitant of academic courses and research.

Wide dissemination of work in this vein, even if tentative and controversial, should be made. Thoughtful practitioners will benefit from theories firmly rooted in the soil of experience. To the extent possible, practitioners,

serving or retired, should be encouraged to undertake introspection and retrospection targetted at theory. Their collaboration with individuals or small groups of informed academicians exploiting the complementary analytical skills and greater detachment of the latter could sharpen the search for provable hypotheses.

Overall, coverage of the subject of intelligence in colleges and universities remains at a rudimentary stage.

Rarely does one find more than one discrete course offered at any university, and two courses appear to be maximum at this time. A few responses state that references to intelligence occur in all relevant courses. However, no academic institution responding to this survey has elaborated its catalogue to provide a complementary portfolio of intelligence related courses. Such a portfolio might include such offerings as: The History of Intelligence in International Politics and American Foreign Policy; Cognitive and Behavioral Factors in Intelligence Analysis; Espionage and Covert Action as Instruments of Foreign Policy; and Managing Intelligence Collection, Flow, and Use in Public and Private Sectors. Such a cluster, possibly scheduled seriatim over two academic years, would provide more sophisticated and profound treatment than is possible with the current reliance on the single survey courses described herein. This modest elaboration of intelligence courses would be responsive to the professional aspirations of students planning careers in the intelligence sector.

The issue of whole intelligence courses versus components is neither false nor crucial. There is merit in both preferences in terms of philosophy and pedagogy.

Faculty and student interest, resources available, and the nature of existing programs in relevant disciplines will dictate decisions at each institution on whether and how to project teaching about intelligence. The knowledge, ingenuity, and open-mindedness of course directors are more important than how the course is labelled and how much time is exclusively devoted to intelligence per se. As stated elsewhere, intelligence cannot be properly studied in a vacuum, divorced from its cultural and political environment, or from its *raison d'être* of policy formulation, execution, and evaluation.

AN AGENDA FOR ACADEMIC SUPPORT DEVELOPMENT

1. Steps should be taken to improve general access to the useful bibliographies already in circulation. However, a teaching oriented bibliography is needed.

Amply annotated with intelligence teaching in mind, constructed around key subtopics addressed in intelligence courses, with appropriate cross-listings under each topic, such a bibliography would provide a service to educators. The optimum version of the list would go beyond books and include major articles and monographs in serious journals reviewed for sound content and low perishability.

2. The perceived textbook gap should be filled on several tracks.

A textbook, Webster reminds his readers, is nothing more or less than a "book used in the study of a subject...containing a presentation of the principles of a subject...."

Several books already in use might qualify, technically speaking. Nevertheless, no single work appears to satisfy the desire for a comprehensive, convenient volume, or series of volumes, treating with recognizable authority and judicious balance, the subject of intelligence as it is being defined in the college and university forum.

This need should be filled, and undoubtedly will

be, not by a single, cosmic publication but by differing, equally valid projects. A straightforward "textbook" can be written, perhaps by a former professional intelligence officer with special qualifications by dint of broad experience. This might be accomplished in collaboration with a knowledgeable academic person.

An annotated "intelligence reader" can be compiled although, if it contains only previously published works, the problem of perishability must be met.

A third formula for intelligence texts would involve newly commissioned contributions to a multi-authored, edited collection in which the complementary expertise and perspectives of the contributors would enhance the product's overall bonafides.

A more ambitious version of the latter approach would establish a series of intelligence studies and would organize single volumes around major subtopics such as history, espionage, technical collection, covert action, counterintelligence, analysis, intelligence and policy, legal and legislative issues, management, and so forth, including a volume on comparative intelligence studies dealing with key foreign systems. The Consortium for the Study of Intelligence is publishing four volumes of papers and discussions deriving from symposia held under its auspices on four major topics. This set, when completed, will partially service the need outlined in this survey.

3. A basic intelligence documents file should be compiled covering the American experience.

This project would primarily service the historical components in intelligence courses. Under certain conditions, it could also provide excellent material for units concerned with analysis, policy relationships, and legislation. The basic documents file would include texts and reproductions of presidential and executive orders, landmark judicial rulings, laws and charters, declassified National Security Council directives, exemplars of declassified or unclassified intelligence production, and other illustrative items from outside the official community. The documents could be used by students, not merely as an information source, but as subjects for critical, comparative analysis.

4. Case studies enjoy high priority on everyone's list of desiderata, and new ones should be constructed.

Several professors, especially those with professional intelligence backgrounds, have already incorporated a case approach into their curricula essentially using material in the public domain. The cases deal mostly with "failures" in analysis and covert action, or unresolved conundrums in counterintelligence.

Enterprising instructors can continue in this fashion with profit. More expedient would be concerted and collaborative work on a group of actual cases chosen to illustrate key points across the spectrum of intelligence topics. These studies would adhere to the same format, designed to support active student involvement in addressing the case in writing, orally, individually, and in a group. Such case studies would benefit from inputs by the official

intelligence establishment even if constrained by classification. As an instructional aid, certain past cases, especially illuminating as to principle but still sensitive, should be acceptable in sterilized form. The case studies should be circulated or made available from a central clearing house location.

5. Intelligence game scenarios should be developed, highlighted with intelligence inputs to interstate conflict situations and with intelligence actors playing leading roles.

These exercises could be from a half day to three or four days in duration. As in the matter of case studies, it seems obvious that interaction between academic and official sectors in simulation development would enhance the product. The games should be widely shared.

6. The receptivity of academic course directors to contributions by outside experts serving as visiting lecturers should be exploited.

A list of qualified former intelligence and policy officers willing to participate in classroom activity should be sent to intelligence educators. The list would include addresses, telephone numbers, and acceptable conditions (whether solicits or waives honorarium, travel, and per diem expenses, etc.). Given the geographical spread of retired professional officers and their motivation for sharing experiences in responsible fashion, it is likely that such a roster will prove to be a valuable resource.

7. A master list of "intelligence visuals" should be compiled.

Films, video tapes, and slides are available from widely diverse sources and under varying conditions. A master list with acquisition data would facilitate their incorporation into intelligence courses. The optimum visuals locator would be succinctly annotated for content and thrust, as this material tends to be even more value-laden than printed literature.

8. A colloquium on "Teaching Intelligence"
should be convened at an early date.

Such a conclave would partially fulfill the widespread interest in a continuing exchange of information and ideas. The meeting would be part and parcel of an ongoing clearing house function which is in order. Participants in the proposed colloquium would primarily consist of persons now directing or planning to direct courses of the kind described in this report. The proceedings would combine discussions of substantive questions, including up-dates on the state of the intelligence community, with a comparison of teaching experiences, i.e., what works, what doesn't work. Panels and workshops on course concepts and structure, on case study development and classroom techniques, on simulations, on research agenda, and on other educationally relevant topics would be held along with plenary sessions to hear top officials, observers, and critics on major issues.

POSTSCRIPT

In conclusion, a few words appear to be necessary about the somewhat special and provocative teaching/learning environment in which intelligence studies have grown in recent years. Observations are made with appreciation for the deeply felt concerns of professors, students, researchers, writers, journalists, and those intelligence practitioners who are either in career-related training assignments or in post-career academic settings.

There are allusions in this report to academic skepticism, to disaffected intelligence officers, to press sensationalism, to prolonged controversies about ethics, oversight, and reform. Debate on these issues was probably inevitable in our society at some point in our history. Engagement has been wide both within and outside of the official intelligence and policy communities. Academics, administrators, teachers, and students have joined the fray with energy, passion, and point.

As previously stated, the acceleration in intelligence course development is partly traceable to these very issues. The process sparked interest and provided the fuel of new information, including some undisputed facts, heretofore unavailable. As academic treatment matures, both in the classroom and in published research, it seems reasonable to examine that treatment in terms of the authenticity of data

projected as "fact" and the evenhandedness of the argument presented on persisting issues. The survey did not purport to address this matter. Impressions gained as by-product are, in general, positive.

The responses do suggest the obvious, however; the potential for polemic is high. It exists in the classrooms of serious realpolitik oriented practitioners turned professors, of equally serious civil liberties-oriented faculty, and, in perhaps less obvious form, in the classes of instructors whose attitude toward intelligence tends to be a function of their political Weltanschauung.

This is not to suggest that persons offering courses on intelligence should fail to share with students either a world view of politics or a viewpoint on intelligence in toto or any part thereof. The greatest teachers have not been known for weak or shyly expressed opinions about their special fields. The teacher's obligation to share conviction is clear. Is there not an equal obligation to encourage the student to observe and weigh competing viewpoints and to seek contrary information from equally admissible sources?

Academic interest in intelligence as a facet of broader disciplines--whether approached discretely or integrally--offers an opportunity to illuminate a subject long confined to the shadows. The light of the truth seekers will serve better than the fire of the partisan. To search out veritas in such a manner is to honor a central commandment shared by academe and the intelligence profession.

Wyden. Bay of Pigs

CANISIUS COLLEGE

Correspondent:
Stafford T. Thomas
Assistant Professor
Department of Political Science
Canisius College
Buffalo, New York 14208

Course: National Security and the Intelligence Community

Covers the history, structures, functions, and problems of the intelligence community. Reviews organization and policymaking in relation to intelligence. Compares the U.S. and Soviet communities.

Presented by Stafford T. Thomas

Selected Bibliography:

Allison, Essence of Decision: Explaining the Cuban Missile Crisis
Kirkpatrick, The U.S. Intelligence Community: Foreign Policy and Domestic Activities

CITY UNIVERSITY OF NEW YORK

Correspondent:
David Syrett
Professor
Department of History
Queens College
City University of New York
Flushing, New York 11367

Course: National Security and Terrorism
Analyze the role of intelligence, subversion, and armed resistance in modern politics. Addresses violence as a instrument of political change.
Required reading: about ten books per term, including such titles as army manuals.

Presented by David Syrett

GEORGETOWN UNIVERSITY

Correspondent:

Ray S. Cline
Adjunct Professor
1800 K Street, N. W.
Suite 520
Washington, D. C. 20006

(Course is taught at School of Foreign Service, International Affairs Department.)

Course: Strategic Intelligence and World Power Assessment

Graduate level seminar examines concepts, structures, and leaders instrumental to evolution of U.S. central intelligence system. It focuses on analysis and estimates, on policy uses of intelligence in context of critical issues and decisions in post World War II era. The course also assesses strategic correlation of forces in the 1980s and surveys U.S. foreign policy and strategy thus bringing substance and process together.

Presented by Ray S. Cline

for the 1980s
Hughes. The Fate of Facts in a World
of Men
Lee. Understanding the Soviet Military
Threat: How CIA Estimates Went Astray

HARVARD UNIVERSITY

Correspondent:
Anthony G. Oettinger
Chairman, Program on Information Resources
Policy
Harvard University
200 Aiken
Cambridge, Massachusetts 02138

Course: Command, Control, Communications,
and Intelligence in Government and
Business

Examines changes since World War II in
conception and technologies as well as
institutional framework of information re-
sources. Addresses implications for nation-
al security and related domestic policies.
Evaluates analogies between functions and
support systems of intelligence staff and com-
mand line on one hand and business management
systems on the other. Course also covers on-
going governmental reorganizations in this field,
strategic arms verification, and cryptography.

Presented by Anthony G. Oettinger

HEBREW UNIVERSITY

Correspondent:

Y. Harkabi

Department of International Relations
The Hebrew University
Jerusalem, Israel

Course: Strategic Studies - Intelligence

Graduate level course planned for 1981 will survey the functions of intelligence, address the psychological and epistemological problems of intelligence production (intelligence failure), and analyze the relationship between intelligence and its political policy masters.

Presented by Y. Harkabi

HOBART AND WILLIAM SMITH COLLEGES

Correspondent:

Peter R. Beckman

Associate Professor
Department of Political Science
Hobart and William Smith Colleges
Geneva, New York 14456

Course: Espionage and Foreign Policy

Explores the linkages among intelligence and foreign policy and specific decisions in the policy field; discusses the institutions, operations policymaker expectations, and the politics of intelligence--all with a comparative approach drawing on U.S. and non-U.S. materials. Course utilizes wartime and military experiences.

Presented by Peter R. Beckman

Selected Bibliography:

Allison. Essence of Decision: Explaining the Cuban Missile Crisis

Lee. Understanding the Soviet Military Threat: How CIA Estimates Went Astray

Barron. KGB: The Secret Work of Soviet Secret Agents
Eisenberg, et. al. The Mossad
Hougan. Spooks
Mosley. Dulles
Plus Periodical literature

TUFTS UNIVERSITY

Correspondent:

Theodore L. Eliot, Jr.
Dean, Tufts University
The Fletcher School of Law and Diplomacy
Medford, Massachusetts 02155

Course: Senior Research Colloquium

During the academic year 1978-1979 this colloquium was devoted to "Intelligence: Deception and Surprise." Graduate students' research and lectures from visiting practitioners are the basis of a book on the subject. Participants included Professors Reginald V. Jones, John Erickson, Uri Ra'anani, Robert L. Pfaltzgraff, and Geoffrey Kemp, as well as Dr. Roberta Wohlstetter and Mr. William Colby. In the coming academic year, issues of intelligence evaluation, especially verification as it relates to arms control agreements, will be addressed in this course.

Presented by Professor W. Scott Thompson,
as course director, in 1980-1981.

UNITED STATES AIR FORCE ACADEMY

Correspondent:

Mark Ewig, Captain, USAF
Department of Political Science
U.S. Air Force Academy, Colorado 80840

Course: Intelligence and Politics

Reviews the development of the intelligence community, roles and structure of current intelligence agencies. It stresses issues facing the community, describes the full intelligence cycle focusing on collection and analysis. Foreign services are studied. The course addresses the special problems of surprise, early warning, and wartime intelligence. Ethics, control, and reform are also addressed.

Presented by Mark Ewig

Selected Bibliography:

- Barron. KGB: The Secret Work of Soviet Secret Agents
Church Committee Reports
Kahn. The Codebreakers
Plus extensive collection of excerpts, off-prints, and press items.

UNIVERSITY OF KENTUCKY

Correspondent:

Vincent Davis
Director, The Patterson School of Diplomacy and International Commerce
University of Kentucky
Lexington, Kentucky 40506

Course: The U.S. Intelligence System

This course will be offered for the first time in academic year 1980-81. It will be a general overview for senior undergraduates and first year graduate students. The course will be listed under the Department of Political Science.

Presented by Scott D. Breckinridge

UNIVERSITY OF LOUISVILLE

Correspondent:
Jerald R. Yankee
Assistant Professor and Director,
International Relations Program
Department of Political Science
3rd Floor, Stevenson Dormitory
University of Louisville
Louisville, Kentucky 40208

Course: The U.S. Intelligence Community in
Domestic and International Politics

Surveys the intelligence function as part of the national security policymaking and implementation process. Examines the entire intelligence cycle beginning with collection techniques and technologies and covers the knowledge and policy relationship. The course also discusses information security systems and impact of secrecy on analysis, policy, and democratic institutions. It analyzes Congress, media impact, and covert action as policy instrument. It examines case studies of successes and failures.

Presented by Jerald R. Yankee

Selected Bibliography:

Barnet. The Roots of War
Frank and Weisband. Secrecy and Foreign Policy
Halperin and Hoffman. Top Secret: National Security and the Right to Know
Marchetti and Marks. The CIA and the Cult of Intelligence
Wilensky. Organizational Intelligence: Knowledge and Policy in Government and Industry
Plus numerous offprints of articles from periodicals and excerpts from Senate and other investigative hearings and reports.

UNIVERSITY OF MANITOBA

Correspondent:

O. Peter St. John
Associate Professor
St. Johns College
University of Manitoba
400 Dysart Road
Winnipeg, Manitoba
Canada R3T 2M5

Course: Intelligence, Espionage, and Terrorism.

Planned for academic year 1980-81 this course will survey the field in terms of policy relationships, collection, ethics, and most key aspects of the subject.

Presented by O. Peter St. John

Course: Intelligence and Espionage

This course is offered in the History Department.

Presented by Francis Carroll

UNIVERSITY OF SOUTH CAROLINA

Correspondent:

Paul M. Kattenburg
Professor, Department of Government and
International Studies
University of South Carolina
Columbia, South Carolina 29208

Course: Strategic Intelligence and National Security

Surveys intelligence role, functions, and issues in context of national security policy-making process. This course will be offered in the fall of 1980 to elite, interested members of the public and to graduate students for credit with special permission.

Presented by Paul M. Kattenburg

UNIVERSITY OF SOUTH DAKOTA

Correspondent:

Tom Lobe

Assistant Professor

Department of Political Science
University of South Dakota
Vermillion, South Dakota 57069

Course: An Overview of Intelligence in Fiction
and Practice

Examines espionage, counterintelligence, covert action, and analysis. It compares the world of intelligence as portrayed in the world of literature with that of the real world. Draws heavily on the memoirs and writings of professionals, and touches on the KGB and moral issues.

Presented by Tom Lobe

Selected Bibliography:

Columbus, Ohio 43201

Course: Introduction to National Security

One week, five sessions, of this course is devoted to intelligence.

Presented by Kenneth H. Watman

Course: An informal seminar for graduate students on strategic intelligence in World War II has been held in the past.

Presented by Dr. Williamson Murray

PORTLAND STATE UNIVERSITY

Correspondent:
Office of Academic Affairs
Portland State University
P.O. Box 751
Portland, Oregon

Intelligence is covered in courses on contemporary history, sociology, and political science.

RICE UNIVERSITY

Correspondent:

John S. Ambler
Chairman
Department of Political Science
Rice University
Houston, Texas 77001

Course: Seminar in American Foreign Policy
Intelligence is treated tangentially in this course. A course in American national security is planned for 1980-1981 or 1981-1982.

Presented by Richard Stoll

RIPON COLLEGE

Correspondent:
Seth Singleton
Associate Professor
Ripon College
Ripon, Wisconsin 54971

Course: National Security Policy
Surveys U.S. foreign and military policy since World War II; studies national security policymaking including intelligence community role; discusses current issues including nature and type of intelligence activities best for country.

Presented by Seth Singleton

Intelligence problems are addressed for about
two weeks in each of the above undergraduate
courses.

SENIOR SERVICE SCHOOLS

OFFERING

PROFESSIONAL TRAINING COURSES

P R O F E S S I O N A L

While the objective instruction in these Senior Service Schools in the U.S. Defense Department complex is professional training, there are many common features with academic courses. Persons involved in Service educational activity are interested, in the main, in exchanging ideas with individuals teaching about intelligence in the academic community.

THE CENTRAL INTELLIGENCE AGENCY
(CIA)

Correspondent:

James Hanrahan
Director, Center for the Study of Intelligence
Central Intelligence Agency
Washington, D. C. 20505

Course Description:

The Center for the Study of Intelligence is part of the CIA's Office of Training which provides extensive Professional education for Agency officials.

The Center is a focal point for the development of principles and theories likely to improve the professional's comprehension of his own vocation and, ultimately, the general understanding of the intelligence process.

Alert to the logic of professional inputs to unclassified, academic enterprise in the intelligence field, the Center hopes to be increasingly helpful to this end.

DEFENSE INTELLIGENCE SCHOOL

Correspondent:

Stanley J. Underdal, Major, USAF
Coordinator of Graduate Studies
Defense Intelligence School
Washington, D. C. 20374

Course Description:

The Defense Intelligence School (DIS) is at the highest level of the military intelligence educational structure. It prepares selected officers and civilian officials

DEFENSE INTELLIGENCE SCHOOL

Correspondent (Continued):
Charles R. Fox, Colonel, USAF
Commandant
Defense Intelligence School
Washington, D. C. 20374

Course Description (Continued):

for key intelligence roles in the national security structure.

Approximately 60 graduate courses in intelligence are offered. They cover the general areas of strategic intelligence, operations, management, and strategic intelligence assessment.

Courses are conducted on a highly classified basis for obvious reasons. In this range of offerings the DIS is unique among all intelligence institutions in the area of strategic assessment. The DIS is chartered by the Joint Chiefs of Staff and reports to the Director of the Defense Intelligence Agency.

There is a newly instituted Master of Science degree in the strategic intelligence program.

A 30-member resident faculty is supported by 10 members of an adjunct faculty.

THE NATIONAL WAR COLLEGE

Correspondent:
Horace Z. Feldman
Director of Intelligence Studies
The National War College
Washington, D. C. 20319

Course Description:

The course entitled "Intelligence and the National Security Process" is an elective offered during the one-year stay of senior officers and civilians at this key senior service school. It stresses the connection of intelligence to policy and to national security decision-making.

THE NATIONAL WAR COLLEGE
(Continued)

Course Description (Continued):

Collection, action, production, and management are discussed as well as moral and legislative issues.

The course is essentially a lecture format with top experts holding forth on their specialties and active discussion following. On one occasion in the past an advanced seminar version was offered, restricted to intelligence professionals in the National War College class of that year.

This is a classified course, but it contains many elements found in academic offerings on the same subject. Course director will be pleased to respond to queries from teachers in the unofficial community.

NAVAL POSTGRADUATE SCHOOL

Correspondent:
Richard J. Schlaff, Commander, USN
Curricular Officer
National Security and Intelligence Programs
Naval Postgraduate School
Monterey, California 93940

Course Description:
Part of an elaborate graduate level educational program maintained by the Navy Department, the Intelligence curriculum is an 18-month program leading to a Master of Arts degree in National Security Affairs.

The aim is to produce intelligence specialists able to apply the broad education received in national security and related matters to the intelligence

NAVAL POSTGRADUATE SCHOOL

Suite 601
1730 Rhode Island Avenue, N.W.
Washington, D. C. 20036

The Consortium for the Study of Intelligence, O
of which Professor Godson is a member and N
Coordinator, has held three symposia on I
Intelligence Requirements for the 1980s: on I
Elements of Intelligence; on "Analysis and N
Estimates," and on "Counterintelligence." T
The papers and discussions concerning the E
first two of the meetings have been published L
by The National Strategy Information Center. L
The Center's address is the same as that of I
the Consortium. G

Papers delivered at the Counterintelligence E
symposium are scheduled to be published C
shortly. A fourth symposium on Covert Action E
will be held in the fall of 1980.

Professor Godson serves as editor of these
volumes.

Richard E. Morgan
Department of Government
Bowdoin College
Brunswick, Maine 04011

Dr. Morgan's book, Domestic Intelligence:
Monitoring Dissent in America, will be pub-
lished by the University of Texas Press in
the late summer or fall of 1980. It is also
scheduled to be published in London.

He has another book in process called
Political Crime.

AUTHOR(S):
Anthony G. Oettinger
Chairman, Program on Information Resources
Policy
Harvard University
200 Aiken
Cambridge, Massachusetts 02138

The Harvard Program conducts extensive ongoing research. A few subjects related to intelligence have been covered in past projects on "Soviet Interception of U.S. Telecommunications and Privacy Issues" in the context of information systems.

Interested persons should solicit detailed data on the Program and its research directly from Professor Oettinger's office.

Several faculty members have been actively involved in problems of intelligence from both substantive and methodological perspectives. In conjunction with the intelligence community some major research questions have been addressed.

Example: Perceptual images brought to crisis warning by Defense Department, State Department, and the CIA. Findings suggested major differences among the three agencies. See manuscript entitled "Perception Behavior Interface in Crisis Management."

This group has done highly relevant and interesting work. It welcomes further inquiry and discussion.

These authors have a book in advanced stages of production. It is entitled Intelligence: Deception and Surprise to be published by MacMillan Press, Ltd. It is based on Senior Research Colloquium and Annual Conference of Fletcher's International Security Studies Program, April 1979. Professors Ra'an and Pfaltzgraff contributed to and edited the volume.

STATISTICS AND MAIN FINDINGS

A BRIEF SUMMARY

Approximately 500 questionnaires were mailed to chief operating officers at colleges and universities, all but a few within the United States. We received 165 replies from a total of 162 institutions. Of the replies, 69 identified or mentioned courses totally devoted to intelligence or with intelligence components; 85 stated that no courses related to intelligence were offered; and 11 acknowledged the survey but gave no additional information.

We identified 27 courses taught at a total of 24 institutions exclusively devoted to intelligence (termed "whole intelligence courses" in this report). This figure does not include courses taught at the U.S. Government senior service and professional schools which offer extensive work in the field.

Whole intelligence courses are, for the most part, structured as "surveys" and cover a large terrain from history to current organization, from the intelligence cycle to policy requirements, from the law to problems of morality and ethics.

We identified 50 courses organized around broader, more traditional concepts which contain "components" specifically devoted to the intelligence process or some facet thereof. In addition, 15 correspondents referred to but did not cite the title or describe at least one other course which deals, in part, with some aspect of intelligence. The courses

referred to and those actually identified are offered at a total of 42 institutions. In many instances the intelligence components are substantial and, in others, tangential. Courses on foreign policy and national security are the most frequently used rubrics for intelligence components.

Sixty-four institutions responded negatively or stated the absence of attention focused on intelligence. In a number of these cases, it is likely that the individual respondent failed to check all pertinent sources and that some existing courses in these institutions do, in fact, address "intelligence" *inter alia*.

Twenty-one institutions in the above "negative" category expressed some interest in developing courses, in learning the survey results, and/or in communicating on the subject of "teaching intelligence" at some future time.

One semester is the normal duration of whole intelligence courses. Only one full-year course was reported.

Student enrollment ranges from 15 for courses holding to a strict seminar format to more than 100 for the straightforward lecture course. Average enrollment in combined lecture/discussion classes is between 30 and 50. Strong student interest was noted in several responses which referred to "over-subscription."

There is no bibliographic consensus, except perhaps on the utility of the Church Committee Reports, on the need for annotated teaching-oriented bibliographies, and on the potential value of case studies as an educational device. Literature in academic use covers the full spectrum from practitioner *memoires* and essays, to *exposé* and critique from insiders and

and outside investigators, to the fruits of the limited scholarship applied in the past as well as a smattering of intelligence fiction. Approximately 40 books make up the composite working bibliography of academic intelligence courses, i.e., publications used in at least one of the reported courses. About a dozen books appear in two or more of the full reading lists received.
